

### HOW ULTRA 2n1 WORKS

- *Dairy producers have observed a synergistic effect when copper sulfate and formaldehyde are used together in a footbath*
- *Ultra 2n1 creates the same beneficial effect, combining both products in the ideal proportion for maximum hoof hygiene*
- *No guesswork involved.*
- *Just add to water for a highly effective, long-lasting footbath*

# Ultra 2n1

## Two powerful compounds One effective solution

**Ultra 2n1** combines two proven footbath additives in the optimum proportion

- **Eliminates the guesswork** of mixing two products separately.
- **Delivers a synergistic effect** for maximum hoof hygiene.
- **Easier to handle** than copper sulfate powder.
- **Contains HOOFMAX™**, a unique additive that ensures activity of copper ions activity throughout the life of the footbath solution.
- **Recommended usage rate** is 12% by volume. This will produce a highly effective footbath containing copper sulfate, formaldehyde, plus penetrating surfactants for cleaning soiled hoofs.

*"The convenience and elimination for error and not worrying about the organic matter in footbaths was achieved at our dairy by switching from copper sulfate to the Ultra 2n1 product."*

- Chris True from True Farms, Perry, NY
